Executive Summary

While alcohol is used for many different reasons, drinking alcohol can be harmful. Alcohol-related harms largely emerge from drinking patterns that result in either intoxication (short-term) or from consumption over long periods of time (long-term), or both. The amount and type of alcohol-related harm differs between communities. Developing local solutions has been identified as an effective way of reducing alcohol-related harm.

A meeting with local key-stakeholders in the Cities of Canning, Armadale and Gosnells in 2017 identified the need to develop a coordinated response to prevent and reduce alcohol-related harm. This resulted in the development of the Cities of Armadale Canning and Gosnells Alcohol Action Plan 2019-2022.

This three year Alcohol Action Plan supports partnerships between community and service providers and outlines comprehensive strategies to address identified local alcohol-related priority areas.

It is acknowledged that many of the strategies within this Alcohol Action Plan are already being implemented and often represent the core business of many of the organisations involved. Not all strategies will be implemented across the three local government areas. Furthermore, strategies may be adjusted to accommodate changing community needs and to align with new evidence.

The priority areas identified in the Alcohol Action Plan are:

- underage drinking
- alcohol-related anti-social behaviour
- alcohol-related support services.

This Alcohol Action Plan was developed following a review of the literature and alcohol-related local data, meetings with individual organisations, youth network participants and East Metropolitan Health Service’s Aboriginal Community Advisory Groups. The data gathered from these processes was then used to inform the planning of workshops with key-stakeholders facilitated by the Mental Health Commission. These workshops identified the alcohol-related concerns and issues affecting this area to support the development of an alcohol action plan.

An Armadale, Canning and Gosnells Local Drug Action Group with key-stakeholder representatives has been established to plan, implement and evaluate the comprehensive strategies outlined in this Alcohol Action Plan.

1.0 Introduction

While alcohol is used for many different reasons, drinking alcohol can be harmful. Alcohol-related harms largely emerge from drinking patterns that result in either intoxication (short-term) or high consumption over long periods of time (long-term), or both. This affects not only the person with problematic alcohol use and their loved ones but also the broader community. The amount and type of alcohol-related harm differs between communities. Developing local solutions has been identified as an effective way of reducing alcohol-related harm.

In 2016 people in Western Australia were slightly more likely to drink alcohol in quantities that placed them at risk of harm on a single occasion (at least monthly) than the national average (27 per cent in WA compared to 26 per cent in Australia). They were also slightly more likely to drink alcohol in quantities that placed them at risk of long term harm than the nation as a whole (18 per cent in WA compared to 17 per cent nationally) (AIHW, 2017).

In April 2017, as a result of concerns from several stakeholders about alcohol-related harm in the Cities of Armadale, Canning and Gosnells, the East Metropolitan Health Service (EMHS) invited key-stakeholders to come together to determine a way forward. The key-stakeholders recognised that addressing alcohol-related harm in communities is complex, cannot be achieved by one sector or organisation alone and, as such, requires collaborative efforts and long term solutions. A key outcome of the meeting was an agreement to collectively develop and implement an alcohol action plan (AAP) to reduce alcohol-related harm in the south east corridor of Perth.

This AAP is a result of the consultations and workshops that have occurred since this resolution. It is the first plan of its kind in Western Australia to tackle alcohol-related harm across three metropolitan local government areas (LGA). It aligns with other alcohol-related strategic documents at the local, state and national level, including local government (LG) public health plans. Furthermore, it is guided by the evidence that indicates that effective local solutions should involve a range of stakeholders, including all levels of government, not for profit organisations and community members. They should be multi-strategic and implemented across a number of community settings (Australian Drug Foundation, 2014).

2.0 Aim

To reduce alcohol-related harm in the Cities of Armadale, Canning and Gosnells.

3.0 How the plan was developed

The plan was developed through a four step process that involved local data analysis and community and stakeholder consultation.

1. Local alcohol-related harm data were collated for the three LGAs. Data included:
   - St John Ambulance cases
   - Emergency Department presentations
   - Hospitalisations
   - Deaths
   - Police assault data

2. A review was carried out to identify previous reports of community and service provider consultations in the three LGAs that included alcohol. See Appendix 1.

3. Consultations were conducted with a range of stakeholders to identify concerns around alcohol-related harm and any existing alcohol initiatives. See Appendix 2.

4. Three workshops were held to expand on the information collected and to enable a consensus to be reached on the priority areas, target groups and strategies. See Appendix 3.
4.0 Priority Areas

- **Priority Area 1:** Underage drinking
- **Priority Area 2:** Alcohol-related anti-social behaviour (ASB):
  - Patrons outside venues after closing time
  - Out of control gatherings occurring in private dwellings and at events
- **Priority Area 3:** Alcohol-related support services

5.0 Target Groups

5.1 Primary target groups

For those living in the Cities of Armadale, Canning and Gosnells.

- **Priority Area 1:** Underage drinking
  - Young people aged 12 - 17 years
- **Priority Area 2:** Alcohol-related anti-social behaviour
  - Young people aged 12-17 years
  - Adults (18 years and above)
- **Priority Area 3:** Alcohol-related support services
  - Community members (all ages) requiring treatment and/or support relating directly or indirectly to problematic alcohol use.

5.2 Secondary target groups

- Parents and/or persons of influence of under 18 year olds living in the Cities of Armadale, Canning and Gosnells.
- School staff; licensees; sporting clubs (licensed and unlicensed); local government staff; local service providers (government and non-government) working in the Cities of Armadale, Canning and Gosnells.
6.0 Strategies
The AAP outlines comprehensive strategies across different settings and target groups. It outlines new project opportunities as well as strategies that are already being implemented and often represent the core business of many of the organisations involved. It is acknowledged that not all strategies will be implemented across the three LGAs. Factors such as local needs, capacity and emerging evidence will determine how and where strategies are implemented.

7.0 Governance
An Armadale, Canning and Gosnells Local Drug Action Group (ACG LDAG) with key-stakeholder representatives has been established to plan, implement and evaluate the AAP. Other key-stakeholders may be invited to attend ACG LDAG meetings as identified and/or appropriate.

7.1 Lead and support organisations
Individual organisations on the ACG LDAG will lead and/or support the implementation of strategies outlined within the AAP. Lead organisations facilitate and coordinate the planning of strategies and tasks. Support organisations, on the other hand, assist lead organisations in whichever capacity they have that is feasible and viable for that particular organisation. The type of support provided by support organisations will therefore vary.

The WA Police Force contact point is the respective District Community Engagement Coordinator.

Furthermore, it is acknowledged that lead and support organisations identified within the AAP may change.

8.0 Reporting and Evaluation
As part of the development of this plan and evaluation framework is being developed. This will enable regular monitoring, evaluation and reporting to occur.

The ACG LDAG will report back to the Local Drug Action Group Inc., the overarching governing body of the ACG LDAG and other member organisations as required.
## 9.0 Action Plan

### 9.1 Underage drinking
